Assignment 2 Group Report

GitHub Collaboration & Automation | Unit Converter

Evidence-based status. This report records the repository state and screenshots reviewed on 25 October 2026. Missing or unverified assignment requirements are identified below.

Group size	3	**Theme**	Unit Converter
Full names	Hiba Aoufouchi; Malak Lamrhaimima; Nihad ADfou	**Course**	CSC 3324, Section 01
Student IDs	118611; 149131; 169642	**Pages**	Not configured / verified
GitHub usernames	hibaaoufouchi4-bot; malaklamrhaimima; NihadADF	**Repository**	Public repository

1. Project & Role Distribution

The group followed the three-member path. The Python project converts length, temperature, and weight. Malak implemented kilometers-to-miles and meters-to-feet; Hiba implemented Celsius/Fahrenheit with an absolute-zero check; Nihad implemented kilograms/pounds with negative-value checks.

2. Branches, Commits & Contributions

Malak, `feature-length`: `59c7395` added conversions; `4107fd3` added tests. **Nihad**, `feature-weight`: `f51e9f2` added conversions; `5ffefc4` added tests. **Hiba**, `feature-temperature`: added conversion logic, a test-file commit, and a docstring correction after review. The merged `tests/test_temperature.py` is empty, so temperature tests are absent from main.

README note: The current team table assigns the correct feature to each member, but uses lowercase names and omits student IDs.

Pull Requests, Reviews & Tests

Repository history and the submitted screenshots were used to verify these sections.

3. Pull Requests & Code Review

PR #1 (Malak, length) and PR #3 (Nihad, weight) were merged after approvals. Nihad reviewed #1; Hiba reviewed #3. PR #4 (Hiba, temperature) received a request to add docstrings explaining the absolute-zero check. Hiba corrected the same `feature-temperature` branch; Malak then approved it and the PR was merged. PR #2 updated the README team table with feature assignments swapped and was closed without merging.

4. Merge Conflict

Not verified. The README contains “Project status: Development in progress,” but the available commit history and screenshots do not show two branches changing that same line, a merge conflict, or a committed resolution. The required controlled conflict cannot be reported as completed from the evidence available.

5. Unit Tests

Main contains three length tests and three weight tests. They cover a normal conversion, zero input, and rejection of a negative value. The temperature test file is empty, despite the PR description mentioning tests, so six meaningful tests are present in main. A submitted Mac screenshot shows 3 passed for the length tests. The Windows screenshot shows pytest was unavailable, so that attempt did not run tests.

Testing status: 6 meaningful tests in main (3 length + 3 weight). Only the length screenshot shows a successful local test run. No temperature tests are present on main.

Automation, Rules & Reflection

Repository configuration checked on 25 October 2026.

6. Continuous Integration

Not configured. The repository has no `.github/workflows/` test workflow, and GitHub reports zero Actions runs. There is no failed CI run, fix, successful rerun, or automated pytest job to describe.

7. Ruleset & Protected main

An active ruleset named `protect main` requires a pull request and at least one approval, and blocks branch deletion and force pushes. There is no required CI status check because no workflow is configured. The submitted screenshot shows the ruleset active and the bypass list empty, but not every rule setting.

8. Continuous Deployment

Not configured or verified. Main has no `docs/index.html` page, and README.md has no live GitHub Pages URL. A Pages deployment and final visible update are not evidenced.

9. Contribution Summary

Member	Feature / branch	PRs authored	Review / tests
Hiba Aoufouchi 118611	Temperature `feature-temperature`	#4 merged; #2 closed unmerged	Reviewed #3; 0 temperature tests on main
Malak Lamrhaimima 149131	Length `feature-length`	#1 merged	Requested changes then approved #4; 3 length tests
Nihad ADfou 169642	Weight `feature-weight`	#3 merged	Approved #1; 3 weight tests

10. Fair Use of AI

AI assistance was used to organize this report and summarize repository and screenshot evidence. The report was checked against the current README, source and test files, pull requests, ruleset state, and screenshots; missing CI, conflict, and Pages evidence is identified rather than filled in. Each member remains responsible for understanding and verifying work attributed to their account.

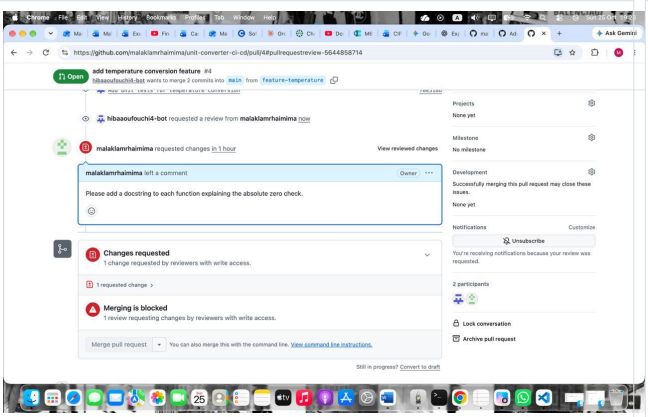

11. Sources & Reflection

Sources: Assignment 2 brief; public repository and PRs #1-4; screenshots supplied by the group. The clearest collaboration issue shown is PR #4's docstring request, which the author addressed on the same branch before approval. For a blocked PR, check approvals and branch rules first. For test problems, confirm pytest is installed; for CI or Pages, verify the workflow or publishing source is configured.

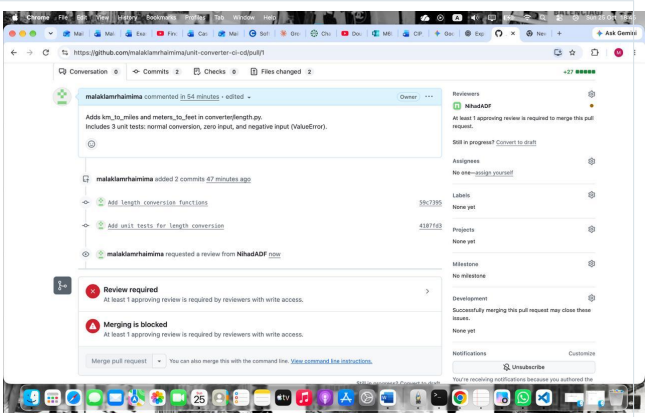

Remaining assignment items: add temperature tests; create and resolve the README merge conflict; add GitHub Actions and capture a failed then successful run; require the CI check in the ruleset; publish and verify a Pages site; commit this report PDF to the repository.

Evidence Screenshots

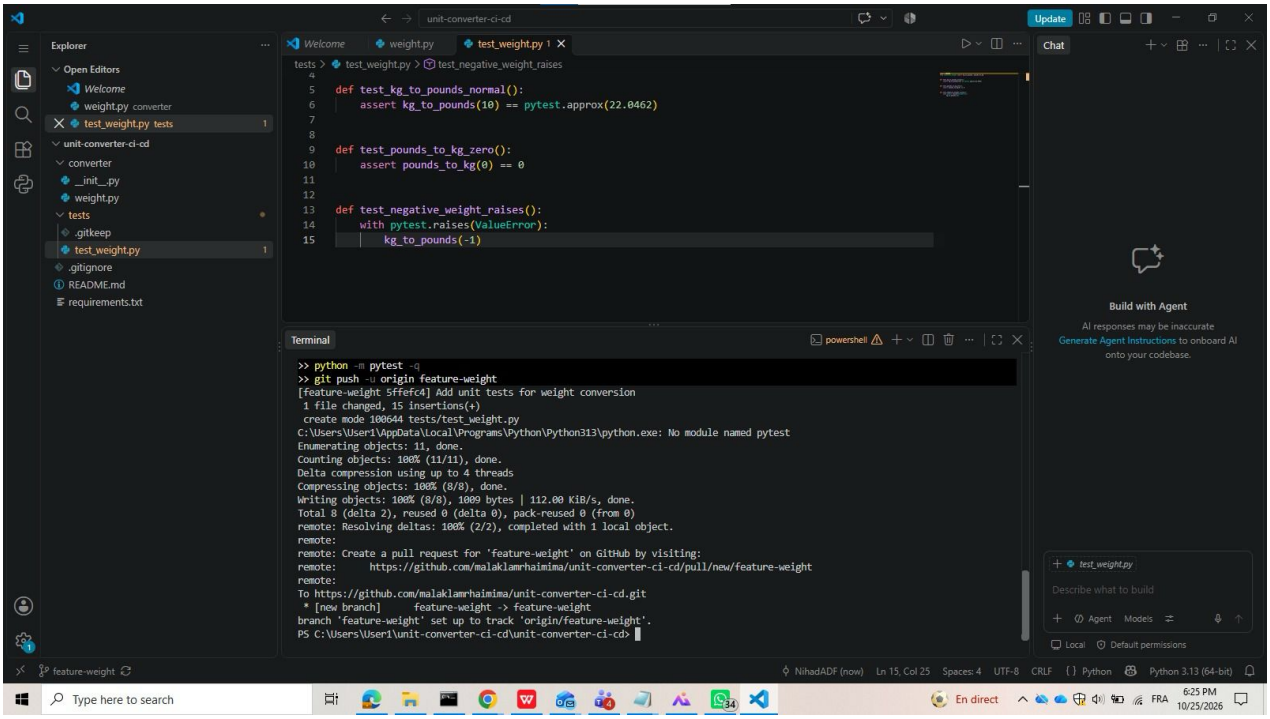

Five project screenshots supplied by the group. Blank template pages are excluded.

PR #4: Malak requested docstrings explaining the absolute-zero check. Hiba later corrected the same branch; the PR was approved and merged.

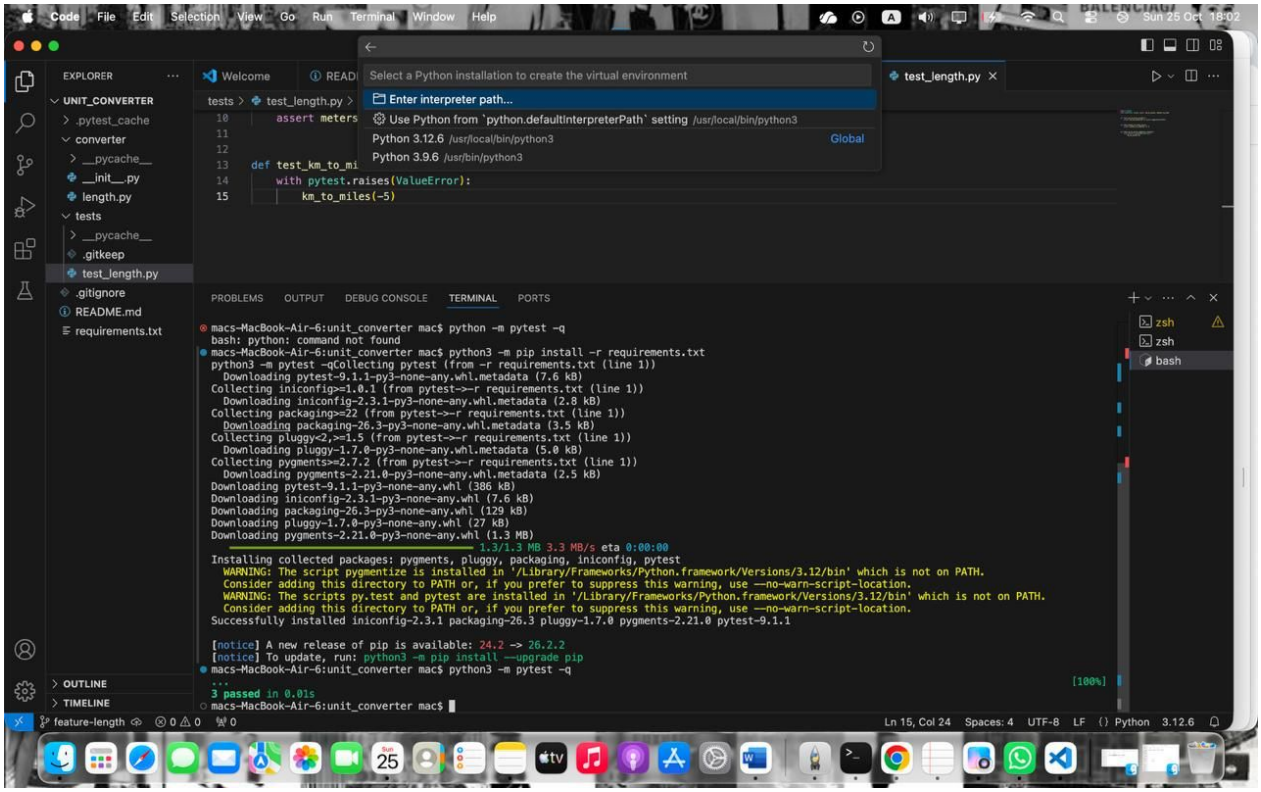

PR #1: two commits are visible; merge was blocked pending NihadADF's approval.

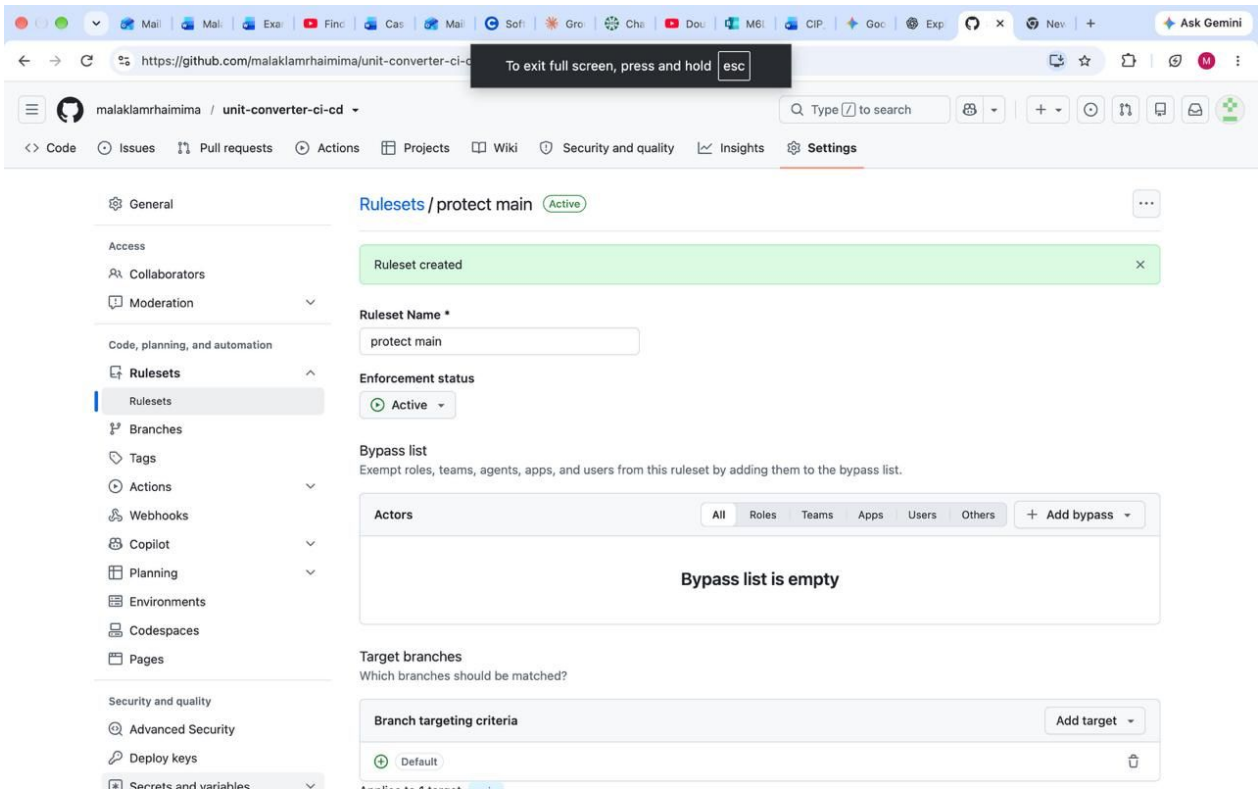

Weight test code and terminal. The local machine reported pytest was not installed; the branch push then succeeded.

Evidence Screenshots (continued)

These images document local tests and the active ruleset. They do not establish that CI, the merge-conflict exercise, or Pages is complete.

Length tests: the local terminal shows 3 passed after pytest was installed.

The protect main ruleset is active and its bypass list is empty. The screenshot does not show every rule setting.
